

IMPROVING SECURITY AND ACCESSIBILITY OF E-LEARNING AND RESEARCH SYSTEMS

Angel Urilski, Valia Arnaudova

Abstract. *The study examines the need to improve the security and accessibility of electronic learning and research systems due to the increasing volume of digital content. It analyzes the primary challenges these systems face, emphasizing the importance of security and easy access for all users. The study proposes specific strategies and technological solutions to overcome these challenges, with a focus on critical cybersecurity measures and approaches to enhance accessibility. The study examines specific applications of the proposed solutions in real systems.*

Key words: E-learning, research systems, accessibility, security.
