

MICROLEARNING USING IT TOOLS – CONCEPT AND BENEFITS

Todor Atanasov, Todorka Terzieva

Abstract. *This research presents results of a study on the concept of microlearning through the application of information technologies. Microlearning is a way of teaching and delivering content to learners in small parts of the teaching material in order to achieve targeted and specific learning outcomes. This article focuses on the nature and characteristics of microlearning, and analyzes the advantages and limitations of this learning approach. Good practices for an educational approach through software platforms applying microlearning are presented.*

Key words: Microlearning, microlearning tools, innovative learning methods.

Acknowledgments

This study is financed by the European Union-NextGenerationEU, through the National Recovery and Resilience Plan of the Republic of Bulgaria, project No. BG-RRP-2.004-0001-C01.
